Hello parents!

It's the summer holidays and *Play Time* has gone to the beach! We've put together lots of seaside activities that will keep children busy for hours.

The Wombles star in our eye-catching colour poster this issue, while Play School shows us how to make funny jellyfish.

Thomas the Tank Engine helps solve a problem down at the harbour in our story on page 24. And Fireman Sam and Mr Squiggle are having their own beach adventures on pages 6 and 10.

All new subscribers this month will receive a free *Maisy* colouring book and will also go into the draw to win *Maisy* videos, soft toys and pop-up books!

We hope your children also enjoy the extra colouring book that comes free with this issue!

Happy holidays!

Animal Kingdom

Dolphin

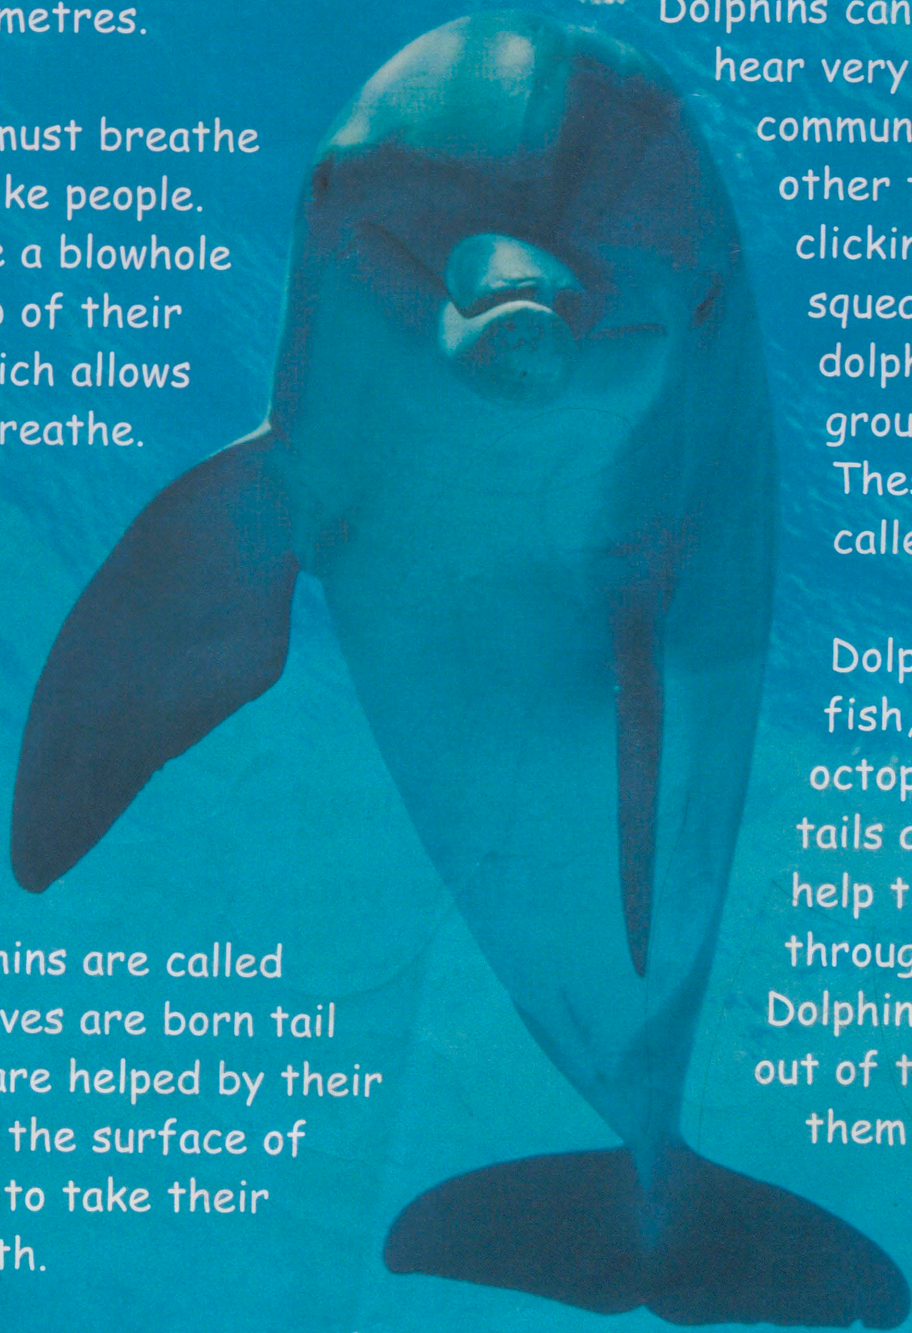

This is a bottlenose dolphin. There are many different kinds of dolphins found in Australian oceans. The bottlenose dolphin is the largest and it grows to around 4 metres.

Dolphins must breathe air, just like people. They have a blowhole at the top of their heads, which allows them to breathe.

Baby dolphins are called calves. Calves are born tail first and are helped by their mother to the surface of the water to take their first breath.

Dolphins can see and hear very well. They communicate with each other through whistles, clicking noises and squeaks. Bottlenose dolphins travel in groups of about 15. These groups are called pods.

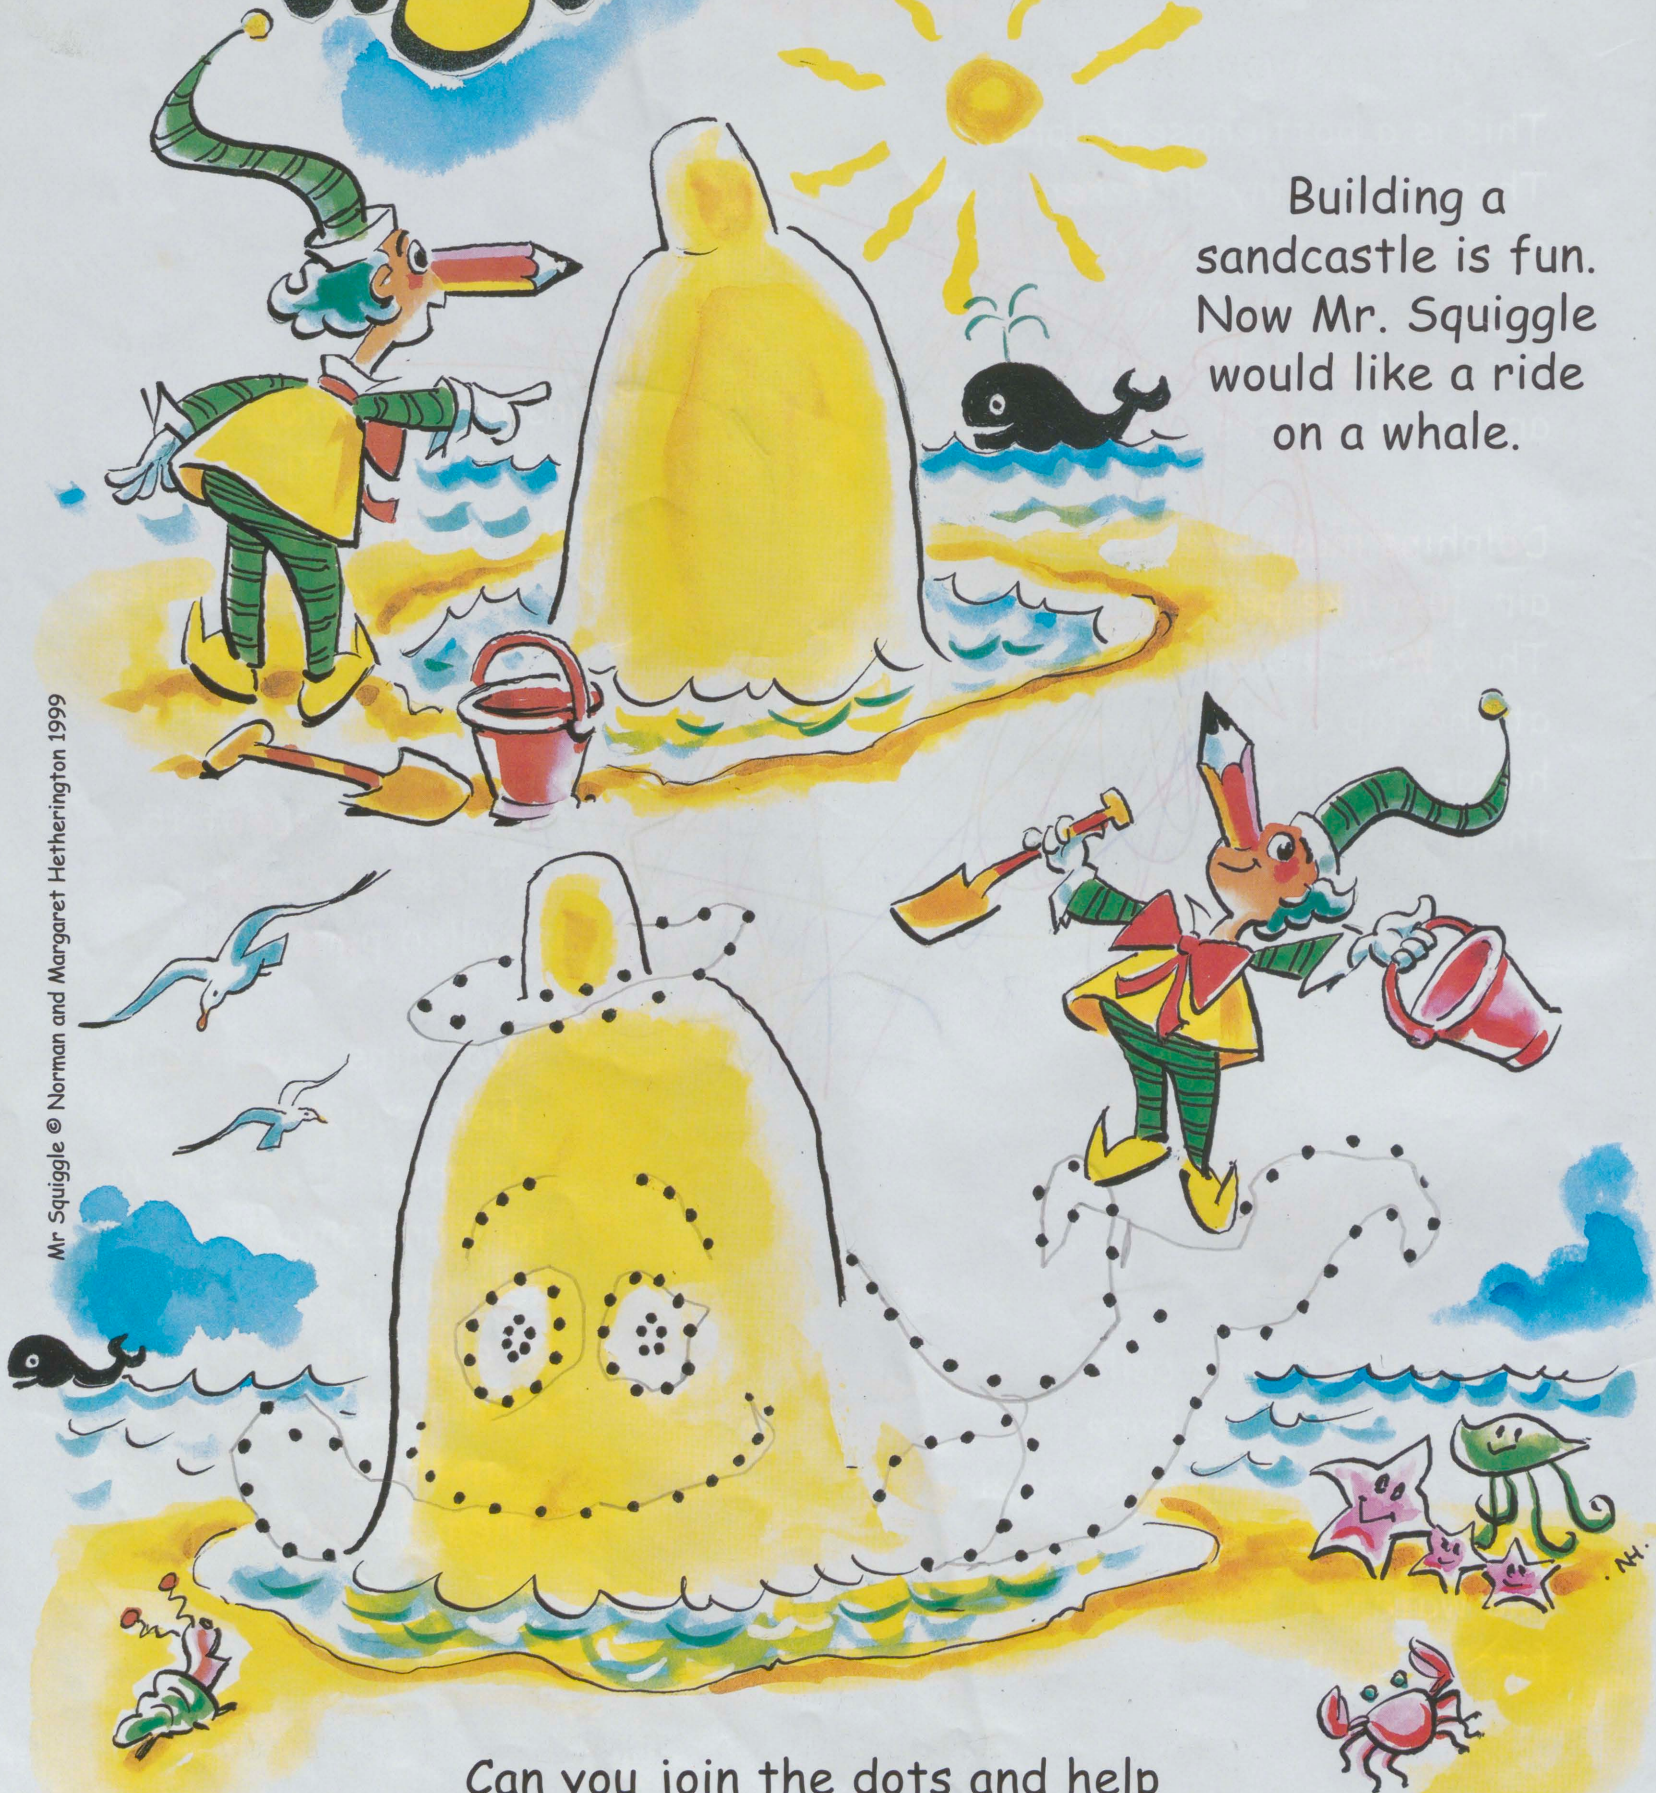

Dolphins like to eat fish, squid and octopus. Their strong tails and smooth fins help them swim quickly through the water. Dolphins also often leap out of the water to help them go even faster.

Mr Squiggle at the Beach

Building a sandcastle is fun. Now Mr. Squiggle would like a ride on a whale.

Can you join the dots and help Mr. Squiggle find a whale?

2. How many candles can you see?
3. How many yellow starfish are there?
4. How many green starfish can you see?
5. What musical instrument is Johnny playing?

Play School

Making jellyfish

You will need:

- Paper cups
- Streamers (strips of paper or cellophane)
- String or wool
- Glue or sticky tape
- Paint or markers
- Buttons
- A pencil
- Scissors

This activity helps children make their own jellyfish from paper cups and streamers. All sorts of funny faces can be painted, drawn or glued onto the paper cups that form the body of the jellyfish. While crepe paper works best, any strips of colourful paper can be used for the wobbly tentacles. Children might like to make many different jellyfish and hang them from a coat-hanger for a colourful mobile.

Step 1

With a pencil or scissors, make a small hole at the bottom of your paper cup. Thread a piece of string or wool through the hole, tying several knots to make sure it stays put.

Step 2

Cut out some long strips of colourful paper or cellophane. Using glue or tape, stick the coloured strips of paper to the inside of the cup. Use as many as you like!

Step 3

Colour the outside of the cup with your paints or markers. Add some buttons for funny eyes!

Step 4

Your friendly jellyfish is ready to hang in your room!

Two cranes

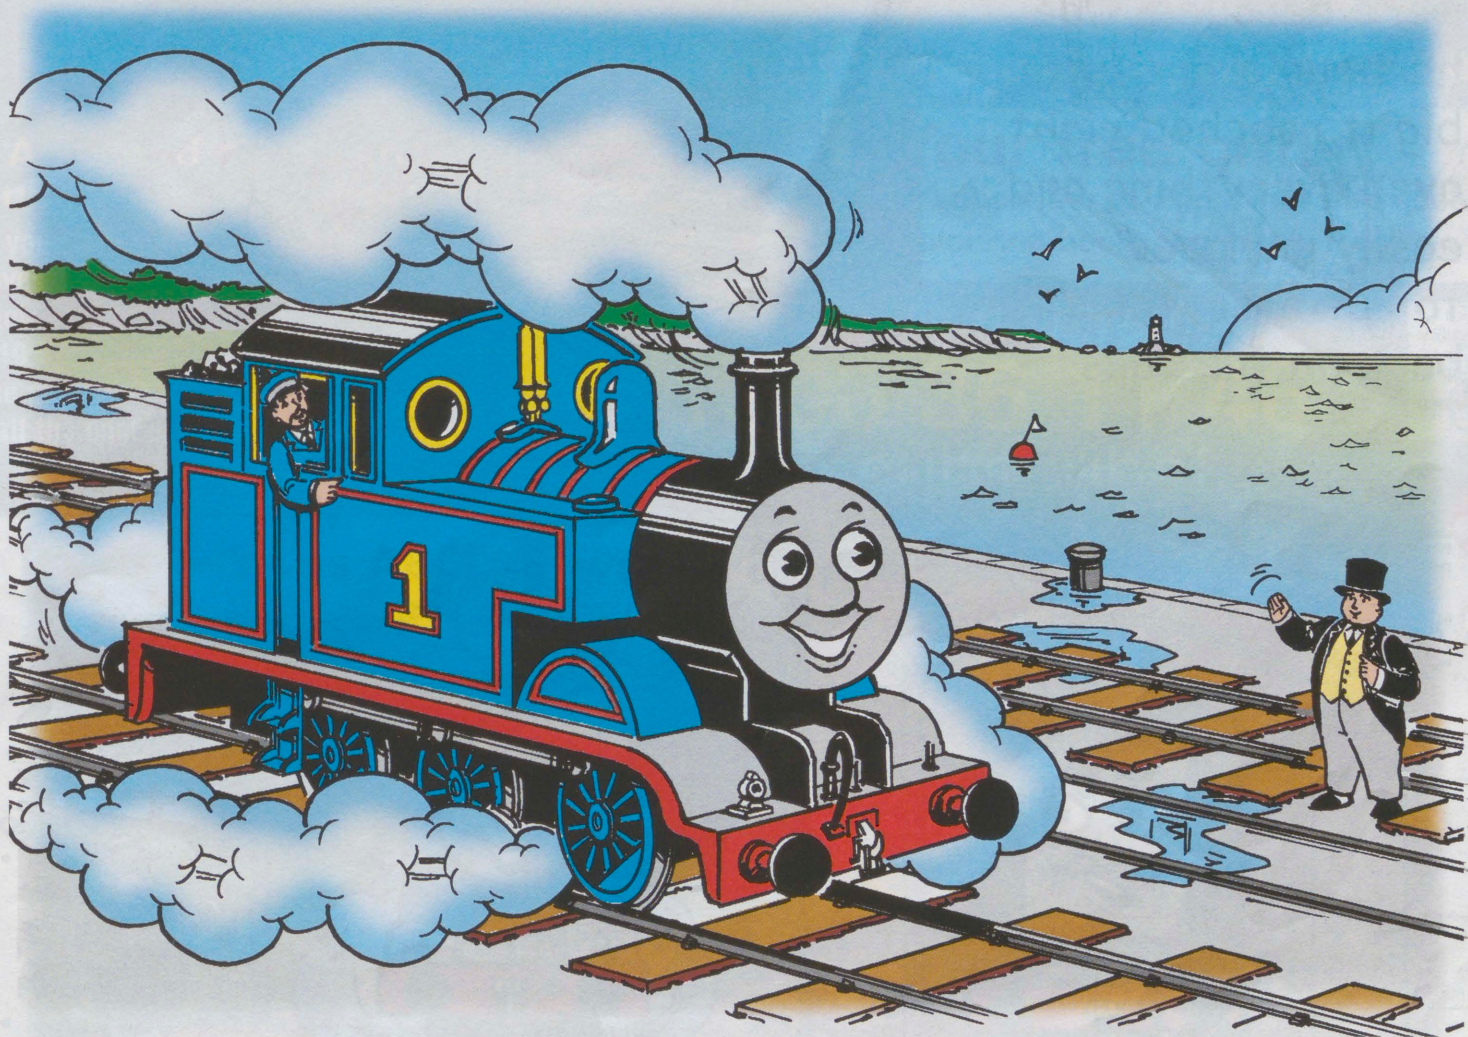

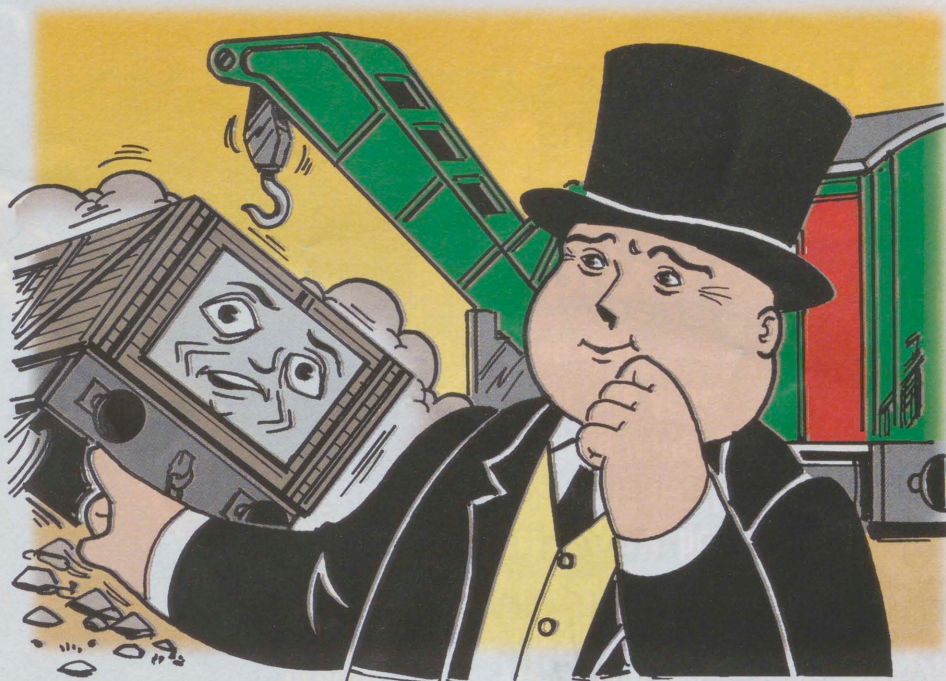

One day, Diesel took some trucks to the harbour but he was not very careful. He did not watch the track, so he didn't notice that it had been damaged. Some of the trucks came off the rails. The Fat Controller sent Thomas to fetch the breakdown train. It has a crane which is used to lift heavy things like engines and trucks back onto the rails.

Thomas puffed off to get the breakdown train and took it to the harbour as fast as he could. He pushed it gently towards the derailed trucks, but some stones fell out of one of the trucks and got under the wheels of the breakdown train. The breakdown train came rattling off the rails too!

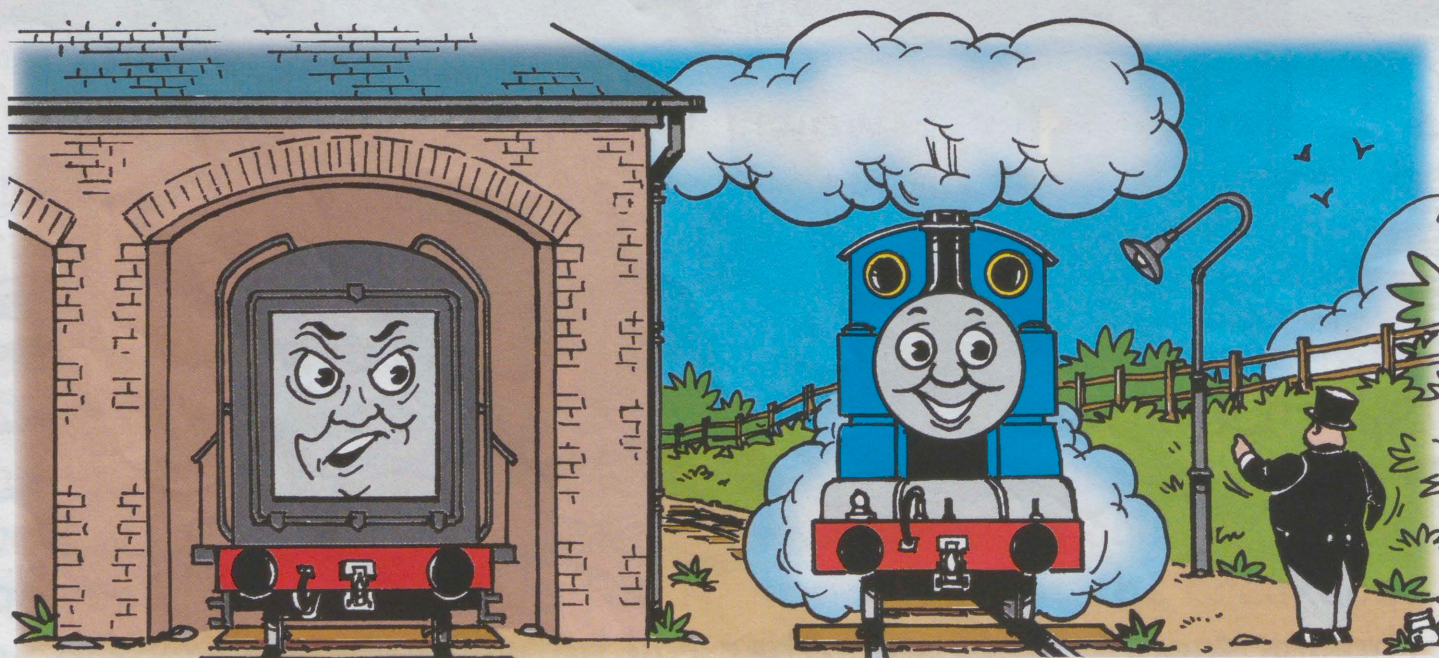

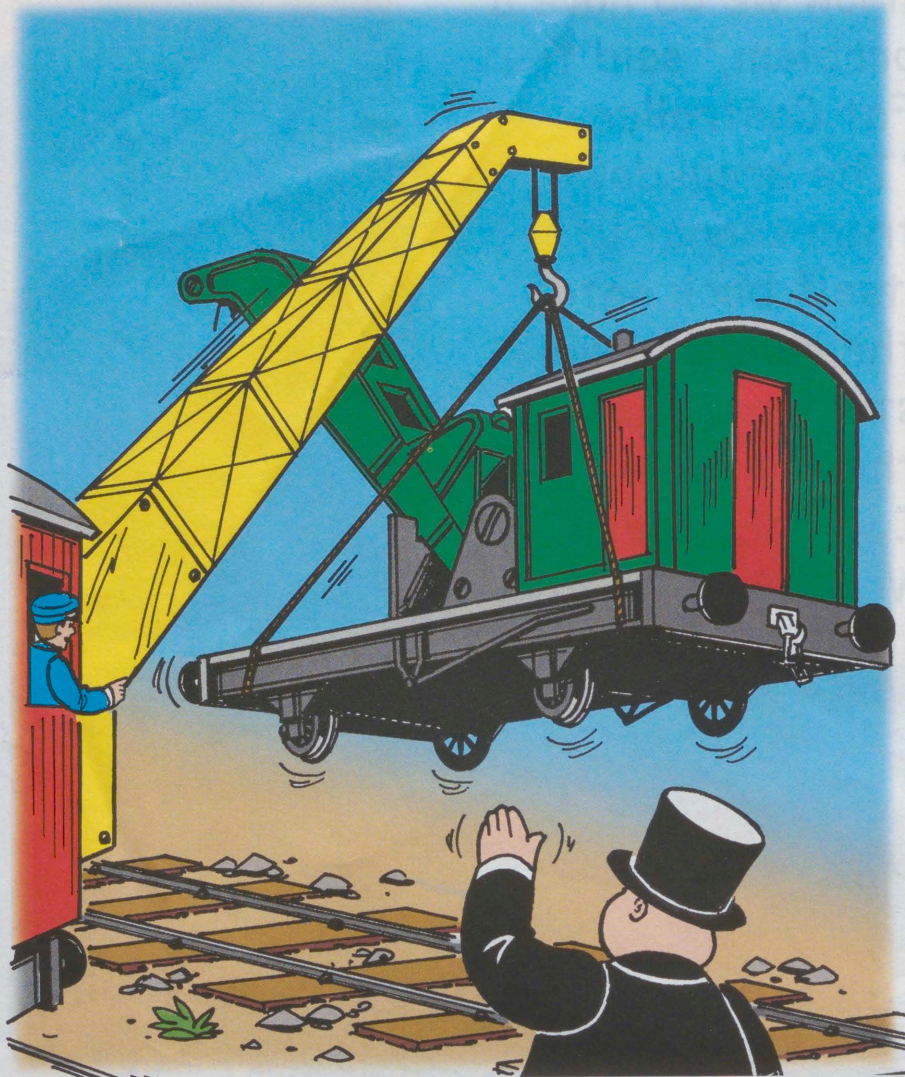

"Now we do have a problem," said the Fat Controller.

"The breakdown train cannot lift itself back onto the rails and we still have to clear these trucks. I wonder what we should do."

Thomas saw there was another rail between the railway tracks and the water. "Excuse me, sir," he asked, "what is that rail for?" "That's the harbour crane rail, Thomas," said the Fat Controller. Then he laughed! "Well done, Thomas! That's what we need! The harbour crane!"

The harbour crane is very large. It runs along the harbour edge and is used for lifting very heavy things on and off ships. The Fat Controller arranged for it to be moved up where the trucks and the breakdown train were derailed. The harbour crane is so big it reached right over everything and easily managed to put everything back on the rails.

The Fat Controller was very pleased with Thomas but he was very cross with Diesel for causing all the problems. Diesel had to stay in his shed for the rest of the day!
